

Atomic Wasteland 2098

By
Dan Gartung
Ken Stark

MISSION NAME: ATOMIC WASTELAND 2098

DATE: JUL 22 2098

BACKGROUND:

Jan 12, 2091

K.L. Srik founds outpost just south of north pole for research, development, and testing of Atomic weapons. It was situated there because of the high-risk in this field of an atomic explosion during the course of development. Its purpose was to develop an atomic bomb compact enough to be undetectable by any long range means such as radar, sonar, or others, in order that 1) a whole country(enemy) could be bombed and destroyed before it had a chance to retaliate, 2) they could actually be snuck into an otherwise heavily protected area(carefully).

Feb 24, 2098

Prototype compact atomic weapon #001 reported finished, ready for testing.

Mar 15, 2098

Prototype compact atomic weapon #001 reputedly tested. Unknown if it actually was. Dr. Ken Stark, biochemistry advisor, was found above ground with lacerations, bruises, and feeble respiration 2.3 miles from underground test site by incoming chopper. Pilot immediately flew him to nearest hospital, many

hours away. After regaining consciousness, he managed retain it long enough to inform an agent of complication in testing of #001 that managed to wipe out all life-forms within outpost at the time of explosion.

Mar 30, 2098

Survey plane flew over outpost. Reported it to be a 'wasteland'. Reported unusual life-forms and proceeded to take samples. No humans were found.

Mar 31, 2098

Sample lifeforms analyzed. Concluded they are 'mutant'. No radio-activity is reported in outpost by survey plane. Conjectured that the Atomic Weapon had unintended effect of rearranging atoms subtly in all matter nearby. Life-forms changed instantly. Most died. Some didn't. Further research suspended. Outpost remains deserted and is restricted.

Jul 6, 2098

Temperature within 20 mile radius of Atomic Wasteland (outpost) has gone up 56 degrees fahrenheit. Radius is increasing. Temperature is increasing. Masses of ice are melting to water. Reason unknown. Range unknown. Consequence if not stopped: at current accelerating melting rate, within 0.9 years enough will have melted to raise sea level substantially - enough to drown many coastal cities.

Jul 21, 2098

Research board is desperate and is willing to let any team of not more than six(6) competent men and women to explore Atomic Wasteland and take any appropriate steps in stopping the disaster. Party's will be flown in by 'copter, and will be hoisted down to Main St of outpost for exploration. Partys may return any time, and services will be available to partys for resting, restocking, etc. when they return.

whoever solves this will be greatly honored and paid handsomely.

PROCEDURE:

0) Place write protect notch on both Atomic Wasteland disc, and your Wizardry disc.

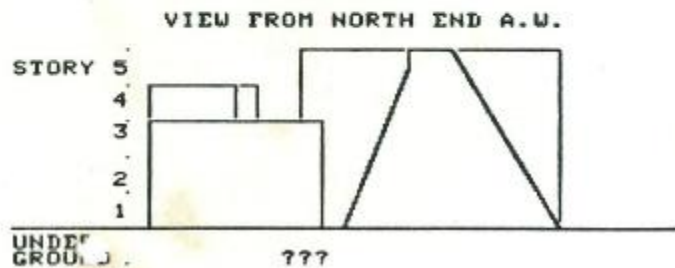

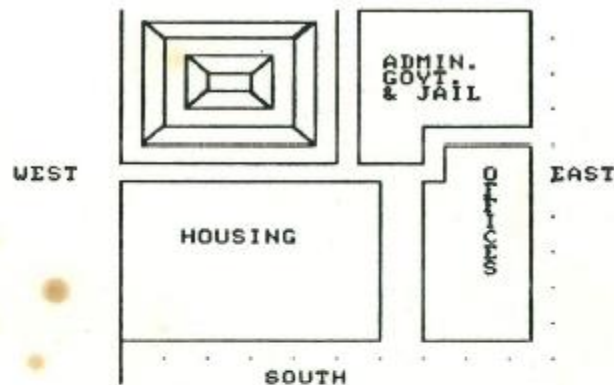

1) Copy scenario: Proving grounds to blank disk (scenario is the side that says 'boot other side')

2) Boot Atomic Wasteland 2098 disk. Press space whenever it says to and you are ready to continue.

3) Respond 'Y' to query 'Have you made copy yet?'

- 4) Respond with '1' or '2' depending on the number of drives you have
- 5) Follow all disk swapping directions CAREFULLY.
- 6) When it is finished, you will have an Atomic Wasteland 2098 scenario. Use it as you would a Proving Grounds DUPLICATE. It will not work as a master. All utilities will work on it.
